LETTER OF SUBMITTAL.

---

WASHINGTON, D. C., April 21, 1919.

SIR: There is submitted herewith a tabulation of the material assembled in the Division of Tabulation and Statistics of the War Trade Board on the stowage of ship cargoes. It was thought desirable that this material should be tabulated and published since it represents the most complete existing collection of data on this subject. It is also the most accurate, as many of the figures are based upon ship manifests and upon actual weights determined on the piers. This publication should be valuable in the shipping business at this time of increasing interest in our merchant marine and foreign trade.

The file was planned by Dr. Lowell J. Reed and represents the work of Mrs. Charmian Howell assisted by Miss Iris Butler.

Respectfully,

KARL DE LAITRE,

Director, Bureau of Research and Statistics,  
War Trade Board.

VANCE C. McCORMICK,  
Chairman, War Trade Board.

## PREFACE.

The stowage of ships, under peace conditions, was a matter of interest principally to masters and agents; under the stress of war, with its resultant destruction of vessels and increased demand for cargo space, it became a subject of great importance to those organizations which were established to control shipping and foreign trade.

In shipping nomenclature, the "stowage factor" of a commodity is the figure which represents the number of cubic feet of cargo space in which a long ton (2,240 pounds) may be stowed. In shipping practice, rates are generally fixed upon the basis of weight in the case of a commodity a ton of which stows in less than 40 cubic feet, and upon the basis of space when a greater volume is required. The figure "40," therefore, represents the assumed average stowage factor of all commodities.

Printed material on this subject is incomplete. There are two standard British texts, R. W. Stevens' *On the Stowage of Ships and Their Cargoes*, and C. H. Hillcoat's *Notes on Stowage*. Both contain valuable data but both are incomplete. Neither was found to be adequate to the needs of this division when, in the spring of 1918, it was called upon to furnish stowage factors for the use of the War Trade Board, the Shipping Board, and the War Department. It was then decided to develop a stowage file from all available sources. The principal sources were: (1) Notes on Stowage by Chas. H. Hillcoat; (2) lists of stowage factors furnished by one trans-Atlantic line, and one line to the West Indies; (3) Bureau of Standards and the War Department; (4) weights and stowage factors furnished by a few exporters and importers; (5) shippers' export declarations, import entries, and steamship manifests (excluding coastwise) currently received by this division; and (6) reports based upon actual weights, measurements, and types of packing or containers as determined by a representative of this division on the New York piers.

A copy of this material was made for the American Expeditionary Force at the request of the General Staff in June, 1918. As a source of current reference the file has been in constant demand. The file, which has been built up on a card basis, is here presented in tabular form, entries being arranged in alphabetical order, with groupings and cross references where they have seemed most necessary.

Where several figures are given for the same commodity and for similar types of packing, it is because they reflect actual shipments which themselves vary. In general, the figures have tended to decrease during the last year, due to more compact packing. This will explain some of the differences between our figures and those of Hillcoat.

.....	Case.....	112	2-0	36	

NOTE.—Measurements are given, in conformity with shipping practice, in cubic feet and twelfths of a cubic foot. Thus, "8-9" signifies eight and nine-twelfths cubic feet.

Stowage represents the number of cubic feet of cargo space in which a long ton (2,240 pounds) may be shipped. Thus, 110 cubic feet is the cargo space required for a ton of abrasives packed in cases averaging 178 pounds gross and measuring 8-9 cubic feet.
